

# Testing the model

## Importing Libraries

```
from tensorflow.keras.models import load_model from tensorflow.keras.preprocessing import
image model = load_model("gesture.h5") #Loading the model for testing
path = "C:\\Users\\Midhun\\OneDrive\\Desktop\\Gesture-Based-Number-Recognition-main\\im6.j
```

## Plotting the image

```
%pylab inline
import matplotlib.pyplot as plt import
matplotlib.image as mpimg imgs =
mpimg.imread(path) imgplot = plt.imshow(imgs)
plt.show()
```

Populating the interactive namespace from numpy and matplotlib

```
#Loading of the image img =
image.load_img(path, color_mode='grayscale',
target_size= (64,64))
x = image.img_to_array(img)#image to array
x.shape
```

(64, 64, 1)

type(x)

numpy.ndarray

```
#changing the shape x = np.expand_dims(x,axis = 0)
```

```
x.shape
```

(1, 64, 64, 1)

## Predicting our results

```
pred = model.predict_classes(x)#predicting the classes pred
```

C:\Users\Midhun\anaconda3\lib\site-packages\tensorflow\python\keras\engine\sequential.py:455: UserWarning: `model.predict\_classes()` is deprecated and will be removed after 2021-01-01. Please use instead: \* `np.argmax(model.predict(x), axis=-1)`, if your model does multi-class classification (e.g. if it uses a `softmax` last-layer activation). \* `(model.predict(x) > 0.5).astype("int32")`, if your model does binary classification (e.g. if it uses a `sigmoid` last-layer activation).
