## **Data Flow Diagrams:**

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

**Example:** (Simplified)

## **User Stories**

Use the below template to list all the user stories for the product.

| User Type              | Functional<br>Requirement<br>(Epic) | User Story<br>Number | User Story / Task  | Acceptance criteria   | Priority | Release              |
|------------------------|-------------------------------------|----------------------|--|-----------------------|----------|----------------------|
| Customer (Mobile user) | Registration                        | USN-1                | As a user, I can upload an image for performing the action.                    | I can upload image    | High     | Sprint-3             |
|                        |                                     | USN-2                | As a user, I can show my hand sign in front of the camera.                     | I can show hand sign  | High     | Sprint-1<br>Sprint-2 |
|                        |                                     | USN-3                | As a user, I will send the result of the uploaded image based on my hand sign. | I can get the result. | High     | Sprint-2             |
| Customer (Web user)    |                                     |                      | same as a mobile user.   |                       |          |                      |
